```

## Details page

controllers/ VoyantController.php

URL example : <https://preprod.kinthia.com/rouge-pivoine/>

## To do

### 1. Number of review count

## To do

Check if the logic count is good for expert.

<https://preprod.kinthia.com/kinthia/>

## **Add Chat consultation**

### **To do**

Currently, we have 3 types of consultations (question, audio, webcam)

The audio and webcam consultations already contain a chat via socket.io

Therefore the work to be done is essentially cloning and adaptation.

The process to set up for the chat consultation is identical to the webcam and audio consultations except that we do not load Jitsi.

We only load socket.io

## Consultation – socket.io

### To do

#### 1.Upload image with socket.io

Currently the upload of images does not work. To be corrected.

#### 2.Remove image uplodaded during consultation

When the consultation is over, delete all the images.

#### 3.Security to check

I have read it. Please give me answser about it :

"rejectUnauthorized: false WARNING: it leaves you vulnerable to MITM attacks!

## Index page

URL example : <https://preprod.kinthia.com/>

Controller : MainController.php

This section needs to be reviewed in its entirety..

## To do

### 1. Order by

The objective is to present in priority the logged experts who consult by webcam, audio or chat.

I give you my vision below. **All suggestions are welcome.**

This part must be carefully optimized to have a fast display.

If needed, cache the request(s) for the time of their validity.

By default the experts should be ordered in this way:

1. Expert logged && audio ON && webcam ON && chat ON && mail ON
2. Expert logged && audio ON || webcam ON && chat ON && mail ON
3. Expert logged && audio ON || webcam ON || chat ON && mail ON
4. Expert logged && audio ON || webcam ON || chat ON || mail ON
5. Expert unlogged && mail ON
6. Expert unlogged && calendarSlot dont la date et la plus proche du jour courant
7. Expert unlogged

### Other characteristics for ordering experts

1. I want this expert display order to be valid for all users for "X" minutes. Default 15 minutes.
2. In order to promote diversity in the display, I want that for each condition, before returning the list of experts, apply a rand().

### 2. Sort by

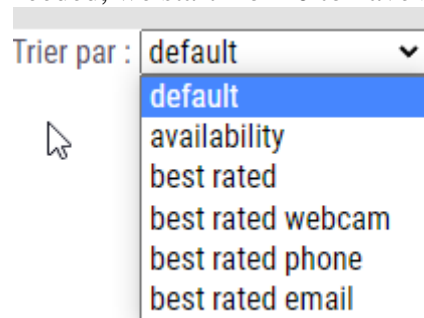

In addition to the default sorting, users can sort according to their needs.

This sorting will be done by Ajax.

It seems to me that the image below needs no further explanation.

Don't hesitate if you need to.

**NB:** The old dev has produced something that seems to work. I let you review the code and if needed, we start from 0 to have something clean.

### 3. Input Search

In the search bar users can search for the name of an expert.

#### 3.1

By typing the first 3 letters, the area where the list of experts is located should display only the expert(s) in case there are results.

#### 3.2

If not, display: "No expert found".

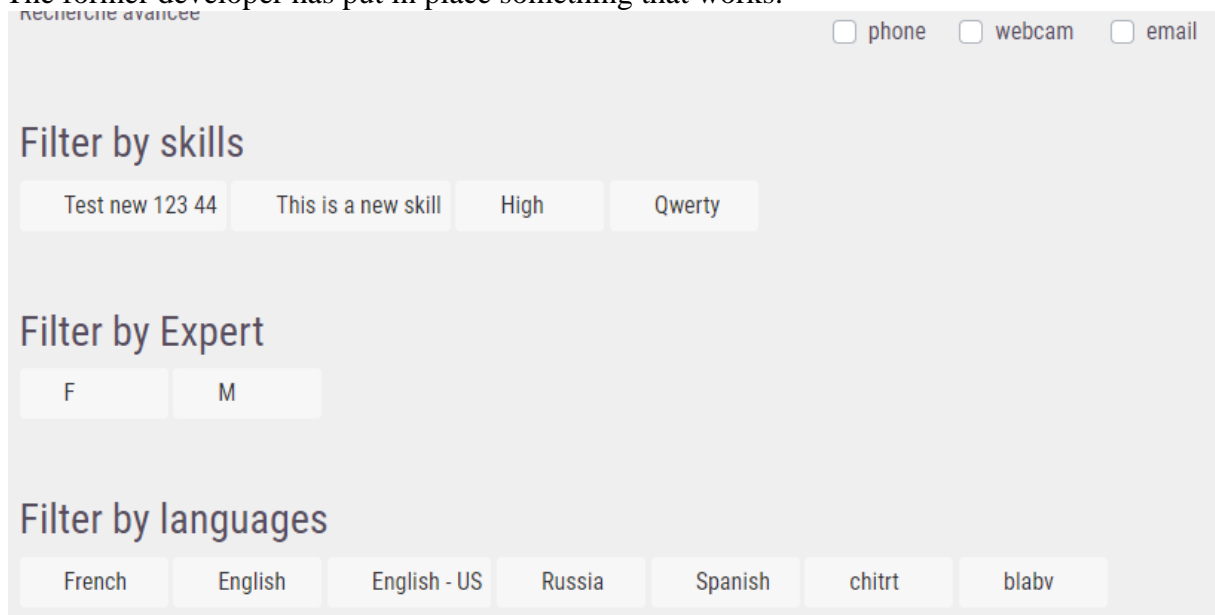

#### 3.3

In the "active filter" zone, the query searched by the user should be displayed. This query can be deleted. The operation is identical to the other filters.

### 4. Filters

Filters allow users to search for users based on characteristics in the database.

The former developer has put in place something that works.

The screenshot shows a web interface with three filter sections. At the top right, there are three checkboxes: 'phone', 'webcam', and 'email'. Below these, the 'Filter by skills' section contains four buttons: 'Test new 123 44', 'This is a new skill', 'High', and 'Qwerty'. The 'Filter by Expert' section contains two buttons: 'F' and 'M'. The 'Filter by languages' section contains seven buttons: 'French', 'English', 'English - US', 'Russia', 'Spanish', 'chitrt', and 'blabv'.

#### 4.1

Please review the code to make sure everything is ok.

#### 4.2 item per page

When one or more filters are activated, the number of experts displayed is limited to a number "x" defined in the conf :

```
$itemsPerPage = Config::get('voyantsPerPage');
```

Currently the system to load more expert is a button with Ajax loading.

This part needs to be reviewed. See point 5.

## 5. Load more expert via Ajax – scroll down

Currently, there is a limit that is defined in the back office:

<https://preprod.kinthia.com/admin/setting>

```
$itemsPerPage = Config::get('voyantsPerPage');
```

### 5.1

The loading of the next "x" experts is done via a "load more expert" button, which seems not to work.

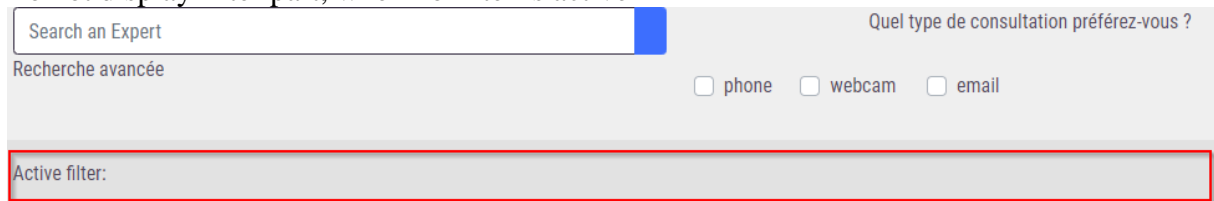

Please change the way it works by removing the button and loading the next experts when the user scrolls down the page.

The first "x" experts must be displayed in the DOM. This point is intended for search engine optimization.

When we scroll down, and new experts are loaded, scrolling up should not be present.

## 6. Active filer

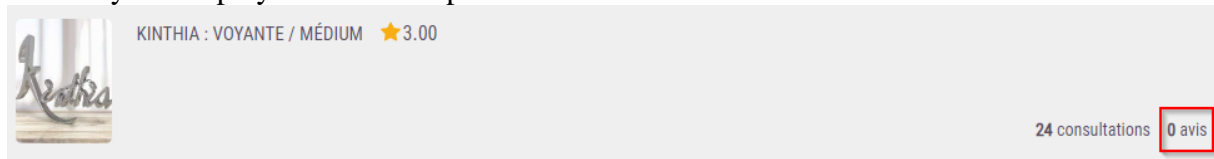

Do not display filter part, when no filter is active

The screenshot shows a search interface with a text input field labeled "Search an Expert" and a blue search button. Below the input field is the text "Recherche avancée". To the right, there is a section titled "Quel type de consultation préférez-vous ?" with three radio buttons: "phone", "webcam", and "email". Below this section is a red-bordered box labeled "Active filter:".

## 7. Expert – number of review

Currently we display 0 for each expert. Please add the correct count.

The screenshot shows an expert profile card for "KINTHIA : VOYANTE / MÉDIUM" with a star rating of 3.00. On the left is a small image of a person. On the right, it says "24 consultations" and "0 avis". The "0 avis" text is highlighted with a red box.

## Skill page

Controller : SkillController.php

Model : SkillModel.php

URL example : <https://preprod.kinthia.com/skill/detail/this-is-a-new-skill>

This part is buggy.

## To do

### 1. To be implemented

The page must have the same functionality as the index page. (loading additional items via ajax scroll, reloading experts information via ajax, ajax filters).

The differentiating point is this:

1. By default the current skill must be active in the search engine.

If the current skill is deleted, we return to the index page.

## 2.1 Points to correct

### 2.1 Variables

1. On the page after the search engine, the data of the variables of the current skill are not taken into account anymore.

Instead the data of another skill is returned... :D

Example :

The data returned are those of the « qwerty » skill -

<https://preprod.kinthia.com/skill/detail/high>

Qwerty skill page : <https://preprod.kinthia.com/skill/detail/qwerty>

### 2.2 Display page

In the back office, I have a box that allows me not to create a skill page.  
It doesn't work. Checked or not, the page is displayed.

On the front office side, when the page is not displayed:

1. Return a 404 error. Use the method ; `$this->return404()`
2. Do not display a link to the page on the word skill.

### 2.3 Index.tpl -> <https://preprod.kinthia.com/skill/>

This page must not exist.

Return a 404 error. Use the method : `$this->return404()`

## All pages

### Ajax login

Add ajax login form

Classic login page already exist. I want to extend it with ajax login form.

# Admin

## To do

### 1. Add the list of orders

List of orders

URL : <http://preprod.kinthia.com/admin/order/list>

Liste des commandes						
Date	User	Order ID	Total	Who was paid	Status	Details
\$date	\$userName	\$41781458	\$totalPrice	Platform or \$expertName	\$status	<a href="#">See</a>
30/01/2023	Germain77	787	280.00€	Rouge Pivoine	Payment accepted	<a href="#">See</a>
23/12/2022	Eglantine	1788	75.00€	Platform	Cancelled	<a href="#">See</a>
28/09/2021	UserNameExample	2977	259.00€	ExpertNameExample	Refunded	<a href="#">See</a>

#### 1.1 Data to be displayed for each order

All the data I am asking you to display for each order is already present in the database.

1. \$date
2. \$userName
3. \$orderId
4. \$totalPrice
5. \$WhoWasPaid (Platform or expert)
6. \$orderStatus (payment accepted/Cancelled/Refounded)
7. \$orderIdDetails

The data that will need to be added/modified are the following:

1. \$orderStatus

All details on this part in point 3. below.

## 2. Add the details of each order

URL : <http://preprod.kinthia.com/admin/order/details>

Details commandes # $\$orderId$  -  $\$wholsPaid$  (plateform or  $\$expertName$ ) Home / Dashboard v3

Client

$\$userName$  # $\$orderId$

E-mail :

torres\_bernard@yahoo.fr

Account created :

29/01/2023 23:04:10

Validated orders :

1

Total spent since registration :

340,87 €

Payment message

$\$wholsPaid$  (plateform or  $\$expertName$ )

$\$StripeMessage$  or  $\$PaypalMessage$

Invoice

See invoice

Items ( $\$itemCount$ )

Item	Price per unit VAT INCLUDED	Quantity	Total VAT INCLUDED
Question add for expert in Admin panel	15.00€	2	30.00€
Pack time 2 - (15min)	15.00€	1	15.00€
Pack time 3 - (30min)	40.00€	4	160.00€
			Total : 205.00€

Status

$\$status$ (payment validated/cancelled)	$\$user.email$	$\$date$ format(dd/mm/YYYY)
Refunded	admin@kinthia.com	31/01/2023
Cancelled	admin@kinthia.com	22/01/2023
Payment accepted	admin@kinthia.com	20/01/2023

Refunded ↕ Update status

### 2.1 Data to be displayed for each order

#### 2.1.1 Details order

1.  $\$orderId$
2.  $\$WhoWasPaid$  (Plateform or expert)

#### 2.1.2 Client

1.  $\$userName$
2.  $\$userMail$
3.  $\$userAccountDateCreation$  (to add)
4.  $\$userOrderValidatedCount$
5.  $\$userTotalSpentSinceRegistration$

#### 2.1.3 Payment message

1.  $\$paymentMessage$ (Paypal or Stripe)

#### 2.1.4 Invoice

1.  $\$invoiceUrl$

#### 2.1.5 Items

1.  $\$itemCount$
2.  $\$itemTitle$
3.  $\$itemPrice$
4.  $\$itemQuantity$
5.  $\$totalPrice$

### 2.1.6 Status

1. \$status (payment accepted / Cancelled / Refounded)
2. \$userMail
3. \$statusDate

### 3. Status of each order

Currently in database, we have a table "orders" which contains a column "status" which if I remember well (I let you check) can have as value :

1. paid
2. unpaid

It is useful to modify it when you get the return from Stripe or Paypal to check if the payment is ok or not and so:

1. return a message to the user
2. keep/empty the basket

In this case, I want to be able to modify the status of the order via the Back Office in case the user wants to cancel the order and get a refund.

The status will allow me to extract orders with a status "x" and a date "t" for accounting purposes.

### 3.1 Registration of status change

I want every status change to be recorded in the database.

### 4. Add the list of cart

URL : <http://preprod.kinthia.com/admin/order/cart>

Cart

Date	Cart Id	Order ID	Client	Total	Details
\$28/09/2021	\$414154545454	\$41781458	\$userName	\$TotalPrice	<a href="#">See</a>
28/09/2021	7878fg8787fg7gjjcsv1	750	Bichette	250.00€	<a href="#">See</a>
28/09/2021	4dgfh47h545454	--	--	0.00€	<a href="#">See</a>

### 4.1 Data to be displayed for each cart

There are some points to modify in order to associate a user to a cart that has no order. See the point: "Identify abandoned carts".

1. \$date
2. \$cartId
3. \$orderId
4. \$userName
5. \$cartTotalPrice
6. \$cartUrlDetails

## 5. Add cart details

URL : <http://preprod.kinthia.com/admin/order/cartDetails>

Cart ID: \$cartId

Cart total: \$cartTotalPrice

### Client

\$userName

E-mail :  
torres\_bernard@yahoo.fr

Validated orders :  
1

Account created :  
29/01/2023 23:04:10

Total spent since registration :  
340,87 €

### Cart Contents - Items (\$itemCount)

Item	Price per unit VAT INCLUDED	Quantity	Total VAT INCLUDED
Question add for expert in Admin panel	15.00€	2	30.00€
Pack time 2 - (15min)	15.00€	1	15.00€
Pack time 3 - (30min)	40.00€	4	160.00€
			Total : 205.00€

### 5.1 Data to be displayed for each cart

There are some points to modify in order to associate a user to a cart that has no order. See the point: "Identify abandoned carts".

#### 5.1.1 Details cart

1. \$cartId
2. \$cartTotalPrice

#### 5.1.2 Client (if have)

1. \$userName
2. \$userMail
3. \$userAccountDateCreation (to add)
4. \$userOrderValidatedCount
5. \$userTotalSpentSinceRegistration

#### 5.1.2 Cart contents (if have)

1. \$itemCount
2. \$itemTitle
3. \$itemPrice
4. \$itemQuantity
5. \$totalPrice

## 6. Add the list of consultations (chat/webcam/phone)

URL : <http://preprod.kinthia.com/admin/order/consultation>

ID	Date	User	Expert	Type	Start	End	Duration	Ended by	Status	Reason	Expert Earnings
\$consultationId	\$date	\$userName	\$expertName	\$type	\$start	\$end	\$duration	\$endedBy	\$status	\$reason	\$expertEarnings
428	18/11/2021	Bibichette45	Rouge Pivoine	phone	2021-11-18 06:00:00	2021-11-18 07:23:32	01:23:32	Expert	End	Consultation ended by the Rouge Pivoine	83.47€
428	2022-02-26	Arf	Kinthia	webcam	2022-02-26 03:14:17	2022-02-26 03:15:41	00:01:24	User	End	Consultation ended by the Arf	1.24€
428	2022-02-26	Arf	Rouge Pivoine	phone	--	--	--	User	Cancel	Arf disconnected	0.00€

### 6.1 Data to be displayed for each consultation

All the data I am asking you to display for each of the consultations are already present in the database. Display all the consultations. Point 12 (\$expertEarnings) must be added.

1. \$ID
2. \$date
3. \$userName
4. \$expertName
5. \$type
6. \$start
7. \$end
8. \$duration
9. \$endedBy
10. \$status
11. \$reason
12. \$expertEarnings

### 6.2 Add search by date (date range)

Date range:

02/05/2023 - 02/05/2023

Search

## 7. Add the list of consultations (question)

URL : <http://preprod.kinthia.com/admin/order/consultationQ>

Date	User	Expert	Question	Status	Expert Earnings
\$date	\$userName	\$expertName	\$questionTitle	\$status	\$expertEarnings
2021-11-18 13:10:53	Arf	Rouge Pivoine	Questions spirituelles	Answered	6.25€
2021-11-18 13:10:53	user Example Name	Expert Example Name	Questions title example	pending	pending - no answer -> no money - 0.00€

### 7.1 Data to be displayed for each consultation

All the data I am asking you to display for each of the consultations are already present in the database. Display all the consultations. Point 6 (\$expertEarnings) has to be added.

1. \$date
2. \$userName
3. \$expertName
4. \$questionTitle
5. \$status
6. \$expertEarnings

### 6.2 Add search by date (date range)

**Date range:**

 02/05/2023 - 02/05/2023

Search

## 8. Invoice management

Invoice management exists but does not work properly. It is necessary to revise this part completely. Here I indicate what must be added in the Admin part. To understand how invoices work, please refer to the **Invoices part**.

### 8.1 List of invoices by month

URL : <https://preprod/kinthia.com/admin/voyantInvoice/list>

Invoices list

Date	Details
\$date	<a href="#">See</a>
January 2023	<a href="#">See</a>
December 2022	<a href="#">See</a>

Invoices should be ordered by date. From the most recent to the oldest.

The data to be displayed is as follows:

1. \$date
2. \$urlToSeeAllInvoicesOfTheCurrentDate

### 8.2 List of invoices for the month

URL : <https://preprod/kinthia.com/admin/voyantInvoice/listByDate>

Generate invoices

Invoices list \$date (January 2023)

Expert	Invoice number	Start Date	End date	See	Upload			Uploaded by Plateform		Generate	Uploaded by Expert
\$userName	\$invoiceNumber	\$startDate	\$endDate	See	Upload	Choose file	Browse			<div>Generate invoices</div>	See
Bibhiccette25	K-Bibhiccette25-21	01/01/2023	31/01/2023	See	Upload	Choose file	Browse			<div>Generate invoices</div>	--
Rouge Pivoine	K-RougePivoine-1	01/01/2023	31/01/2023	See	Upload	Choose file	Browse			<div>Generate invoices</div>	See

Invoices should be ordered alphabetically by expert. From A to Z.

#### 8.2.1 List of data

1. \$generate all invoice
2. \$expertName
3. \$invoiceNumber
4. \$invoiceStartDate
5. \$invoiceEndDate
6. \$see invoice generate by plateforme
7. \$uploadInvoice
8. \$see invoice uploaded by plateforme
9. \$delete invoice uploaded by plateforme
10. \$generate invoice's expert

11. \$see invoice uploaded by expert

### 8.2.2 Generate invoices

To generate the invoices, two possibilities:

1. Le bouton principal qui génère la facture de chaque expert.
2. Le bouton dédié à un expert.

### 8.2.3 Upload Invoice

1. Add the possibility to upload an invoice. It replaces the invoice generated by the platform.
2. By uploading another invoice, the previous invoice is replaced by the new one.
3. Add the possibility to delete the uploaded invoice. By deleting it, the invoice is replaced by the invoice generated by the platform.

## 9. User

### 9.1 Profil image

Currently the upload of the profile picture works.

But it is not taken into account on the FO, nor on the BO. The default image is not replaced.

## 10. Reviews

### 10.1 Some comments are not attributed to the right expert

URL : <https://preprod.kinthia.com/admin/user/userReview/>

13 Avis & notes								
Date	Voyant	User	Consultation	Note	Avis	Publié	Action	
2023-06-12	testtesttest	test	Question	5 /5	question test de testtesttest	Non	Update publish Delete	
2023-06-12	testtesttest	test	Question	4 /5	another question Linda	Non	Update publish Delete	

# VoyantPanel

## 1. Add the list of consultations (chat/webcam/phone)

URL : <http://preprod.kinthia.com/voyantPanel/consultation/consultation>

ID	Date	User	Type	Start	End	Duration	Ended by	Status	Reason	Earnings
\$consultationId	\$date	\$userName	\$type	\$start	\$end	\$duration	\$endedBy	\$status	\$reason	\$earnings
428	18/11/2021	Bibichette45	phone	2021-11-18 06:00:00	2021-11-18 07:23:32	01:23:32	Expert	End	Consultation ended by the Rouge Pivoine	22.53€
428	2022-02-26	Arf	webcam	2022-02-26 03:14:17	2022-02-26 03:15:41	00:01:24	User	End	Consultation ended by the Arf	00.17€
428	2022-02-26	Arf	phone	--	--	--	User	Cancel	Arf disconnected	00.00€

### 1.1 Data to be displayed for each consultation

All the data I am asking you to display for each consultation is already present in the database. Display only the consultations of the expert. Point 11 (\$earnings) is to be added.

1. ID
2. \$date
3. \$userName
4. \$type
5. \$start
6. \$end
7. \$duration
8. \$endedBy
9. \$status
10. \$reason

### 1.2 Add search by date (date range)

Date range:

 02/05/2023 - 02/05/2023

Search

## 2. Add the list of consultations (question)

URL : <http://preprod.kinthia.com/admin/order/consultationQ>

Liste des consultations

Date	User	Question	Status	Earnings
\$date	\$userName	\$questionTitle	\$status	\$earnings
2021-11-18 13:10:53	Arf	Questions spirituelles	Answered	6.25€
2021-11-18 13:10:53	user Example Name	Questions title example	pending	pending - no answer -> no money - 0.00€

### 2.1 Data to be displayed for each consultation

All the data I am asking you to display for each consultation is already present in the database. Display only the consultations of the expert. Point 5 (\$earnings) is to be added.

1. \$date
2. \$userName
3. \$questionTitle
4. \$status
5. \$earnings

### 2.2 Add search by date (date range)

Date range:

 02/05/2023 - 02/05/2023

Search

### 3. Invoice management

Invoice management exists but does not work properly. It is necessary to review this part completely. Here I show you what should be added in the expert part (Panel light). To understand how invoices work, please refer to the **Invoices part**.

#### 3.1 Data to be displayed for invoices

URL : <http://localhost/kinthia15/voyantPanel/voyantInvoice/list>

Date	Details	Upload	Uploaded Invoice
\$date	<a href="#">See</a>	<input type="button" value="Upload"/> <input type="text" value="Choose file"/> <input type="button" value="Browse"/>	<input type="button" value="🔍"/> <input type="button" value="🗑️"/>
January 2023	<a href="#">See</a>	<input type="button" value="Upload"/> <input type="text" value="Choose file"/> <input type="button" value="Browse"/>	<input type="button" value="🔍"/> <input type="button" value="🗑️"/>
December 2022	<a href="#">See</a>	<input type="button" value="Upload"/> <input type="text" value="Choose file"/> <input type="button" value="Browse"/>	--

Please display the following data:

1. \$invoiceDate
2. \$Link to the invoice generated by the platform
3. \$upload field
4. \$ Link to the invoice uploaded by the expert
5. \$ Link to delete the invoice

### 4. Change Calendar

URL : <http://localhost/kinthia15/voyantPanel/voyantCalendar/>

#### 4.1 Create calendar

Create Calendar	<input type="checkbox"/> Select All
Calendar type:	<input type="checkbox"/> phone <input type="checkbox"/> webcam <input type="checkbox"/> email
<input type="button" value="Create"/>	

This part works.

I want to hide the different types of calendars and display only one. You can call it "all". Indeed currently having several calendars is too complex for experts.

## 4.2 Use the calendar

### 4.2.1 Add the time zone

Please add the list of time zones. The expert can then select it. It will be displayed on the FO.

### 4.2.2 Add data

Manage Calendar : phone - Week : \$weekNumber - Date : \$startDate to \$endDate (example: Week : 9 - Date :27/02/2023 to 05/03/2023)

In order to make it easier for the user to find his way around the calendar weeks, please display the following data:

1. \$weekNumber
2. \$startDate
3. \$endDate

## 4. Improve the operation of adding and deleting attendance hours

	00h	01h	02h	03h	04h	05h	06h	07h	08h	09h	10h	11h	12h	13h	14h	15h	16h	17h	18h	19h	20h	21h	22h	23h
4/02																								
5/02																								
6/02																								
7/02																								
9/02																								
10/02																								

Fuseau horaire : **Paris**

☐ Présent(e) ☐ Absent(e)

Currently 1 line = 1 day divided into 48 slots. 1 slot = 30 minutes. This operation is very good.

To add or remove slots, we press the button « Add present » or « Add absent ».

Then we select on the calendar the slots we want to add or remove.

At the moment you can only add or remove slots line by line, so day by day. It is not possible to add/remove slots on several days simultaneously.

I would like to be able to do this.

## 5. Add the expert's status

Tpl : voyantPanel/templates/kinthia/menu/menuleft/menuleft.tpl

Add the status of the expert in the menuleft. It must therefore be present on all the pages of the "voyantPanel".

As the management of the session lifetime and the different statuses are not 100% reliable, this will allow to inform the expert if his status is correct or not. This will make it easier to debug.

1. Three possible statuses:
2. Available
3. In consultation
4. On vacation

## 6. Expert session – to change / to add

This part needs to be completely revised.

The management of the experts' session is essential so that the users are informed in real time of the availability of the experts.

### 6.1 Lifetime of the session

1. The session lifetime must be managed via cookie.
2. The session lifetime must be "x" minutes. This parameter must be added in the config. Let's start with 90 minutes.
3. The session duration is reset as soon as the expert is active. That is to say that he uses the " Panel light " (page change, page refresh).

### 6.2 Killed session

#### Case 1

The expert closes his browser - > killed session

=> FO side :

1. The expert is offline. He can no longer consult by chat/webcam/audio.
2. The expert can make consultations by email (question) if activated on the « voyantPanel » side.

#### Case 2

The expert presses the "log out" button

=> FO side :

1. identical **case 1**

### 6.3 Inactivited after « x » minutes

If the expert is not active during the time defined via the parameter, I want :

1. a popup to be displayed + a sound signal (the popup must contain a link "I am present" which refreshes the page and resets the session time).
2. Send email to the expert.

Following the warning, if the expert does not answer after 5 minutes, the session is killed.

# Invoices

## 1. Admin

### 1.1 Question : create / edit

For each question add the price before tax. I added a field. This field allows you to know the value of the item before tax.

The price before tax is not necessarily intended to be stored in the database. I just want to know the price before tax. It is purely informative. You can therefore calculate it from the price including VAT.

Price:	<input type="text"/>	Without Tax	<input type="text"/>	Included Tax
--------	----------------------	-------------	----------------------	--------------

### 1.2 Pack time : create / edit

For each time pack add the price before tax.

The price before tax is not necessarily intended to be stored in the database. I just want to know the price before tax. It is purely informative. You can therefore calculate it from the price including VAT.

Price:	<input type="text"/>	Without Tax	<input type="text"/>	Included Tax
--------	----------------------	-------------	----------------------	--------------

### 1.3 VAT to be applied

The VAT applied is either :

1. The VAT of the expert in case the expert is paid directly
2. The platform's VAT in case the platform is paid.
- 3.

## 2. Customer invoice

The VAT applied is either :

1. The VAT of the expert in case the expert is paid directly
2. The platform's VAT in case the platform is paid.

## 3. Invoice of the experts

VAT must be applied accordingly.

1. If not subject to VAT, please indicate. No VAT is applied.
2. If subject to VAT. VAT is applied.

**See more explanations below.**

## Transfer of the money to the expert – Creation of the invoices

The payment of the money to the experts must be calculated. Indeed, this calculation allows to know the amount that the platform must pay to the expert each month.

This calculation allows to generate an example of invoice of the past month for each expert.

This calculation is unique for each expert.

Each value below is present on the expert's profile.

So each expert has his own calculation.

### 1. Value of earning paid to experts

Admin BO

URL : <https://preprod.kinthia.com/admin/voyant/edit/2>

#### Payment - pay back money to the expert

Email:

Gain paid back to the expert for a question (%) - excluding taxes

Phone:

Gain paid back to the expert for 1 minute (€) - excluding taxes

Webcam:

Gain paid back to the expert for 1 minute (€) - excluding taxes

The value of the winnings paid out is always exclusive of tax.

**NB: The value of the winnings paid to the experts can change at any time.**

Therefore the expert's earnings must be calculated after each consultation (question / chat / audio / webcam).

- 1. This gain must be stored in the database after each consultation.**
- 2. This is very important, as it can impact all previous earnings and invoices.**

### 2. Calculation of the earnings paid to the experts

Each expert can be subject to VAT (tax) or not.

The value of the VAT (tax) is unique for each expert.

TVA (%):

Display TVA on invoice :

☒ ON ☐ OFF

### 3. Who gets paid for consultation (question)

Question type consultations can be paid to either :

1. The expert
2. The platform

Payment Item question - Who is paid

Expert or platform: (ToAdd)

☐ Expert ☒ Plateform

#### 3.1 The platform is paid

If the platform is paid, then the questions must be included in the invoice generated by the platform.

Indeed, in this case the platform is paid, so it must pay money to the expert for his work

#### 3.2 The expert is paid

If the expert is paid directly, then the questions should not be included in the invoice generated by the platform.

Indeed, in this case the platform is not paid. It is the expert who is paid directly.

So the platform does not pay any money.

### 4. Who gets paid for consultation (chat / audio / webcam) ?

**It is always the platform that is paid.**

Indeed, the time packages are always paid to the platform.

This time bought by the users is used during the consultations with the experts.

We transform this time into money.

Therefore for each consultation performed, the expert must be paid.

The consultations (chat / audio / webcam) are always included in the invoice generated by the platform.

### 5. Calculation of the amount earned by an expert for a question - payment to the platform

**We calculate everything before tax. It is much simpler.**

For a question we base ourselves on the price before tax of the question.

Then we refer to the % paid to the expert. **For the example 50%.**

#### **Attention**

In the back office, **the price of the questions is all taxes included.**

1.

**It is therefore necessary to calculate the price of a question excluding tax.**

Example with a question at 60€ including tax.

The VAT is 20%. We use the VAT field present at this URL:

<https://preprod.kinthia.com/admin/voyant/edit/2>

The calculation is as follows:

$$60/1.20 = 50$$

The price before tax of the question is therefore 50€.

2.

**In a second step we calculate the expert's gain**

I take an example where the expert earns 50% of the price before tax of a question

The calculation is as follows:

$$(50/100)*50 = 25$$

The platform pays the expert 25€ without taxes.

## **6. Calculation of the amount earned by an expert for a consultation (chat / webcam / audio)**

**We calculate everything before tax. It is much simpler.**

For a consultation we base ourselves on the amount without tax paid to the expert indicated at this URL: <https://preprod.kinthia.com/admin/voyant/edit/2>

Example with a configuration at 0,90€ before tax:

1 consultation at 01h43:30s

Calculation :

$$(60*60)+(60*43)+30 =$$

$$3600+2580+30=$$

$$6210/60 =$$

$$103,5*0,90 =$$

$$93.15$$

The platform pays 93.15 € excluding taxes to the expert.

## 7. Examples of reversion calculations with sample invoices

### 7.1 Case 1

The expert does not pay taxes (VAT OFF).

The expert is paid directly for the questions

The expert's earnings per minute (chat / webcam / audio) is 1€ before tax.

Number of questions treated : 15 - earnings : 250€ (not present on the invoice since paid directly)

Number of consultations by phone : 20 : total time 1h23:32s

Number of consultations by webcam : 15 : total time 1h02:54s

#### Invoice generated

Result here : <https://preprod.kinthia.com/admin/voyantInvoice/detailsCas1>

### 7.2 Case 2

The expert pays the taxes (VAT ON - 20%).

The expert is paid directly for the questions => The platform does not pay any money to the expert.

The expert's earnings per minute (webcam / phone) is 1€ **excluding taxes**.

Number of questions treated : 15 - earnings : 250€ (not present on the invoice since paid directly)

Number of consultations by phone : 20 : total time 1h23:32s

Number of consultations by webcam : 15 : total time 1h02:54s

#### Invoice generated

Result here : <https://preprod.kinthia.com/admin/voyantInvoice/detailsCas2>

#### **Calculation of VAT (taxes) for consultation by phone**

$$(60*60)+(60*23)+32 =$$

$$3600+1380+32 =$$

$$5012/60 =$$

$$(83.53)*(1.20)=$$

$$100.24 - 83.53 =$$

$$16.71$$

$$\text{VAT} = 16.71$$

#### **Calculation of VAT (taxes) for consultation by webcam**

$$(60*60)+(60*2)+54 =$$

$$3600+120+54 =$$

$$3774/60 =$$

$$(62.9)*(1.20)=$$

$$75.48 - 62.9 =$$

$$12.58$$

$$\text{VAT} = 12.58$$

#### **TOTAL VAT**

$$16.71+12.58 = 29.29$$

### 7.3 Case 3

The expert does not pay taxes (VAT OFF).

The platform is paid for the questions => The platform pays money to the expert (50%)

The expert's profit per minute (webcam / audio / chat) is 0.90€ **excluding taxes**.

Number of questions treated : 7 (Present on the invoice since paid to the platform)

Number of consultations by phone : 20 : total time 1h23:32s

Number of consultations by webcam : 15 : total time 1h02:54s

#### Calculation of VAT (taxes) for question

It is necessary to take the amount of VAT applied by the platform to obtain the amount before tax of the questions.

2\* Question sentimental : 15€ tax included

5\* Rouge astrologique 60€ tax included

The VAT is 20%. We use the VAT field present at this URL: <https://preprod.kinthia.com/admin/setting/>

The calculation is as follows:

$$15/1.20 = 12.5$$

The price before tax of the question is therefore 12.5€.

$$12.5/2 = 6.25$$

$$6.25*2 = 12.5$$

$$60/1.20 = 50$$

The price before tax of the question is therefore 50€.

$$50/2 = 25$$

$$25*5 = 125$$

#### Invoice generated

Result here: <https://preprod.kinthia.com/admin/voyantInvoice/detailsCas3>

### 7.4 Cas 4

The platform pays the taxes (VAT ON - 20%).

The expert pays the taxes (VAT ON - 20%).

The platform is paid for the questions => The platform pays money to the expert (50%)

The expert's profit per minute (webcam / phone) is 0.90€ **excluding taxes**.

Number of questions treated : 7 (Present on the invoice since paid to the platform)

Number of consultations by phone : 20 : total time 1h23:32s

Number of consultations by webcam : 15 : total time 1h02:54s

#### Invoice generated

Result here : <https://preprod.kinthia.com/admin/voyantInvoice/detailsCas4>

**Calculation of VAT (taxes) for question**

It is necessary to take the amount of VAT applied by the platform to obtain the amount before tax of the questions.

Question sentimental : 15€ TTC

Rouge astrologique 60€ TTC

The VAT is 20%. We use the VAT field present at this URL: <https://54.70.244.243/admin/setting/>

The calculation is as follows:

$$15/1.20 = 12.5$$

The price before tax of the question is therefore 12.5€.

$$(12.5/100)*50=$$

$$6.25*2$$

$$12.5*1.20=$$

$$15-12.5=$$

$$2.5$$

$$\text{VAT} = 2.5$$

$$60/1.20 = 50$$

The price before tax of the question is therefore 50€

$$(50/100)*50$$

$$5*25=$$

$$125*1.20=$$

$$150-125=$$

$$25$$

$$\text{VAT} = 25$$

**Calculation of VAT (taxes) for consultation by phone**

$$(60*60)+(60*23)+32 =$$

$$3600+1380+32 =$$

$$5012/60 =$$

$$(83.53)*(0.90)=$$

$$(75.18)*(1.20)=$$

$$90.22 - 75.18 =$$

$$15.04$$

$$\text{VAT} = 15.04$$

**Calculation of VAT (taxes) for consultation by webcam**

$$(60*60)+(60*2)+54 =$$

$$3600+120+54 =$$

$$3774/60 =$$

$$(62.9)*(0.90)=$$

$$(56.61)*(1.20)=$$

$$67.93 - 56.61 = \\ 11.32$$

$$\text{VAT} = 11.32$$

$$\text{TOTAL VAT} \\ 2.5+25+15.04+11.32 =53.86$$

## Send email for each action

Email sending is managed by PHPMailer :  
/components/PHPMailer/

The list of sent emails is centralized in the admin.  
They are stored in the "custommessages" table.

### Sending emails works perfectly.

I want to add emails for some actions and add variables.

## 1. Add functionality for each email

For each email add :

1. Sender email
2. Add variables

## 2. Sending email for the following actions

### 2.1 Buy question (item question)

To be modified  
Sending 3 emails :

#### 2.1.1 Admin

- \$userName
- \$expertName
- \$questionTitle
- \$questionPrice
- \$orderId

#### 2.1.2 Expert

- \$userName
- \$questionTitle
- \$questionPrice

#### 2.1.3 User

- \$expertName
- \$questionTitle
- \$orderId
- \$orderPrice
- \$linkToQuestionToWrite (the user must ask his question in a textarea so that the expert can answer it)

## **2.2 Buy time pack**

To add

Sending 2 emails :

### **2.1.1 User**

- \$packtTitle
- \$packTime
- \$orderId
- \$orderPrice

### **2.1.2 Admin**

- \$packtTitle
- \$packTime
- \$orderId
- \$orderPrice
- \$userName

## **2.3 Attempted consultation by the user (chat/webcam/phone)**

To add.

Sending 2 emails :

### **2.3.1 Admin**

- \$userName
- \$consultationType
- \$date

### **2.3.2 Expert**

- \$userName
- \$consultationType
- \$date

## **2.4 Attempted consultation by the user (chat/webcam/phone) (failed)**

To add

Sending 1 email :

### **2.4.1 Admin**

- \$expertName
- \$userName
- \$consultationType
- \$date

## **2.5 End of consultation (chat/webcam/phone)**

To add

Sending 3 email :

### **2.5.1 User**

- \$expertName
- \$consultationId
- \$consultationDuration (00h00 :00s)

### **2.5.2 Expert**

- \$userName
- \$consultationId
- \$consultationDuration (00h00 :00s)

### **2.5.3 Admin**

- \$userName
- \$expertName
- \$consultationId
- \$consultationDuration (00h00 :00s)

## **2.6 Send private message from user to expert**

To add

Sending 2 email :

### **2.6.1 Admin**

- \$userName
- \$expertName
- \$privateMessage

### **2.6.1 Expert**

- \$userName
- \$privateMessage

## **2.7 Send private message from expert to user**

To add

Sending 2 email :
